

ACTION STATION

PureCompost Lab

What to do after the experiment ends.

You built a bin and watched scraps turn to soil. Here's what comes next: habits to practice at home, and organizations already doing this work.

IN THIS GUIDE

Home Habits

Groups to Join

A Pledge

Learning sustainability should be sustainable.

KEEP GOING

Keep Going At Home

Small habits, kept up over time, matter more than any single experiment.

1

Keep a Scrap Bucket

Collect fruit and vegetable scraps in a container, even without a bin or a yard.

2

Post the List

Keep a note on the fridge of what can and can't go in, so anyone in the house can help.

3

Feed a Garden

Give finished compost to a garden at home, at school, or at a neighbor's house.

4

Waste Less Before It Starts

Plan meals so fewer scraps get made in the first place.

A NOTE FOR GROWN-UPS

These habits work best when they're part of the routine, not a one-time thing. A weekly reminder is all it takes to keep them going.

GET INVOLVED

Take It Further

Ready for more? Here's how to bring what you learned to the people around you.

Find a Drop-Off Site

Look up a community composting spot near you with an adult. MakeSoil.org maps locations across the country.

Ask Your School

See if your school already has a compost bin for lunchroom scraps, or ask about starting one.

Start a Compost Crew

Collect scraps from a few neighbors each week and combine them in one bin.

My Pledge

I pledge to help turn scraps into soil by _____
