

FUN FACTS

PureWater Lab

All about water

Did You Know?

Only a tiny sliver of Earth's water is water we can drink.

Most of it is salt water in the ocean, or frozen in ice at the poles.

Water is always moving.

It rises into the sky, turns into clouds, falls as rain or snow, then finds its way back to rivers and lakes.

You use more water than you think.

Leaving the faucet running while you brush your teeth can use several gallons.

Filters clean water, but not perfectly.

That's why the water from your tap has already been tested and cleaned first.

A shower uses less water than a bath.

A quick shower can use a third of the water it takes to fill a bathtub.

Rivers carry water from mountains to the sea.

Snow melts on high peaks, then travels for miles before reaching the ocean.

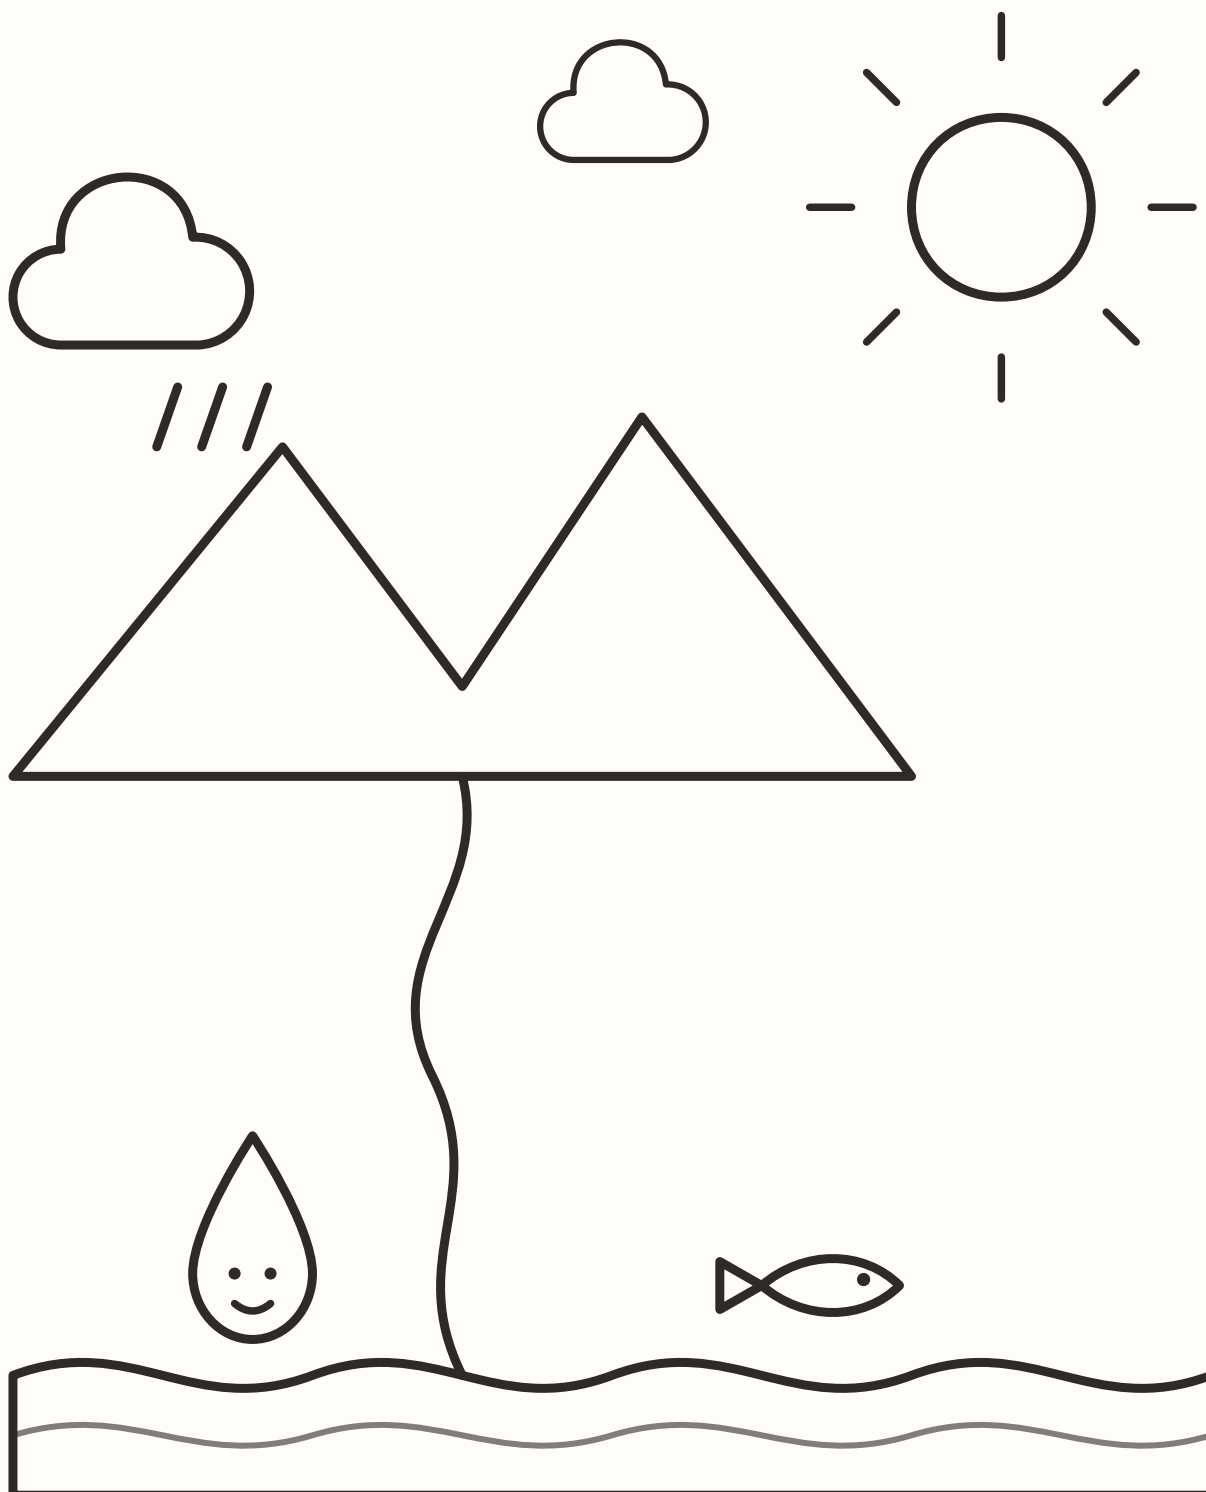

TRY THIS

Next time you wash your hands, time how long the water runs. Can you turn it off a few seconds sooner?

COLOR IT IN

PureWater Lab

Color the water cycle — from clouds, to rain, to river, to sea.

☐ RAIN

☐ CLOUD

☐ RIVER

☐ FILTER

☐ DROP

☐ OCEAN

☐ CYCLE

☐ CLEAN

Sort It Out

Which of these help save water?

Write yes/no or circle each answer.

Turn off the tap

Take a short
shower

Leave the hose
running

Fix a leaky
faucet

Bonus Challenge

Count how many times you and your family use water today — every faucet, shower, and glass counts!
