

ACTION STATION

PureWater Lab

What to do after the experiment ends.

You tested water and built a filter. Here's what comes next: habits to practice at home, and organizations already doing this work.

IN THIS GUIDE

Home Habits

Groups to Join

A Pledge

KEEP GOING

Keep Going At Home

Small habits, kept up over time, matter more than any single experiment.

1

Turn Off the Tap

While you're brushing your teeth or scrubbing dishes, turn the water off until you need it again.

2

Fix a Drip

Tell an adult about any leaky faucet in the house. A slow drip adds up to gallons over a week.

3

Time Your Shower

Try finishing before a favorite song ends. Shorter showers use a lot less water.

4

Water Smart

Water plants early in the morning or later in the evening. Less water evaporates when it's cool out.

A NOTE FOR GROWN-UPS

These habits work best when they're part of the routine, not a one-time thing. A weekly reminder is all it takes to keep them going.

GET INVOLVED

Take It Further

Ready for more? Here's how to bring what you learned to the people around you.

Join Project WET

A national water education program with activities built for kids. Ask an adult to look up a chapter near you.

Try EPA WaterSense Kids

Games and challenges about saving water, made for kids, from the U.S. Environmental Protection Agency.

Start a Water Watch

Team up with a couple friends. Test water at a few spots near you. Share what you find.
